Remarks: The dough elasticity and stretchability are evaluated using the **Alveograph** and **Extensograph** analyses, where the **Alveograph** measures extensibility through the "**L**" value, the balance between tenacity and extensibility through the "**P/L**" ratio, and elasticity through the "**Ie**" (**Elasticity Index**) parameter, while the **Extensograph** directly measures dough stretching capacity and elastic tolerance through the "**Extensibility [mm]**" parameter at different resting intervals.
